Python

absolute value function. $\overset{\frown}{AV}$

abs ($\underline{\qquad}$) ⟵ what went AV δ

```python
def main():
    number=input("Enter a negative number:
")
    float(number)
    print(type(number))
    print("The value of 10 times the number
is",10*number)
    abs(number)
    print("The absolute value of the number
is:", number)
```
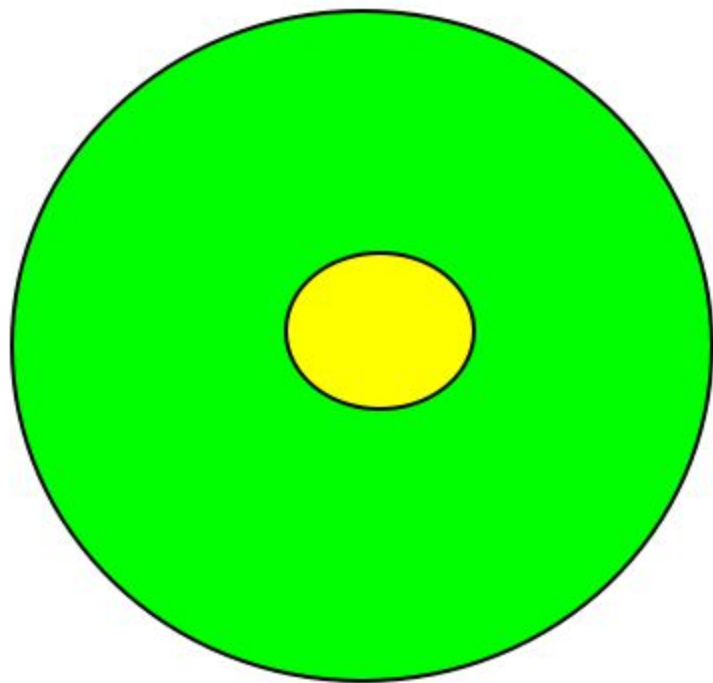

number → Str —— "27.6"

___

↑

Assignment operator

factorial

$$n! = n(n-1)(n-2) \cdots 3(2)(1)$$
