Quanta Quiz

volume  $f^3$

surface area  $- f^2$

$$\frac{f^3}{\textcircled{f}} \rightarrow f^2$$

$$\frac{a^3}{a} \rightarrow a^3 a^{-1} = a^{3+(-1)} = a^2$$

$$1 \text{ watt} = \frac{1 \text{ joule}}{\text{sec}}$$

energy

$$100 \text{ watts} = 100 \overset{\text{power}}{[\text{j/sec}]}$$

$$1 \text{ minute of usage: } 100 \frac{\text{j}}{\text{sec}} \times 1 \text{ min} \times \frac{60 \text{ sec}}{1 \text{ min}}$$

$$= \underline{6000 \text{ joules}}$$

$$300 \frac{\text{mg}}{\text{kg} \cdot \text{day}} \times 30 \text{ kg} = 9000 \frac{\text{mg}}{\text{day}}$$

$$9000 \frac{\text{mg}}{\text{day}} \times \frac{1}{3} \text{ day} = 3000 \frac{\text{mg}}{\text{hour}}$$

$$8 \text{ hours} \times \frac{1}{24} \text{ day} = \frac{1}{3} \text{ day}$$

$$4 \text{ L} \times \left( \frac{.08 \text{ g}}{100 \text{ ml}} \right) \times \frac{1000 \text{ ml}}{1 \text{ L}} = 3.2 \text{ grams}$$

$$4 \text{ L} \left( \frac{1000 \text{ ml}}{1 \text{ L}} \right) \cdot 0.08 \left[ \frac{\text{g}}{100 \text{ ml}} \right] = 3.2 \text{ grams}$$
